Shared Grocery List

AI-Powered Grocery Sharing for Modern Households

Context & Problem

👥

End Users

Roommates, couples, and families who share grocery shopping responsibilities and need to coordinate household purchases.

😤

The Problem

No shared visibility into household supplies — someone forgot to buy milk, someone bought bread twice. Leads to waste, frustration, and duplicated purchases.

💡 **Solution:** A simple shared grocery list accessible from any device — create a room, share the code with roommates, and everyone can add items manually or via natural language AI input.

Implementation

⚛️ React | 🐍 FastAPI | 🐘 PostgreSQL | 🐳 Docker | 🤖 AI Agent

Version 1

- ✓ Basic grocery list (single user)
- ✓ Add/remove items
- ✓ Mark items as "bought"
- ✓ Simple CRUD interface
- ✓ SQLite database

Version 2

- ✓ Shared rooms with 6-char codes
- ✓ Multi-user real-time sync
- ✓ AI natural language input
- ✓ Room isolation & security
- ✓ PostgreSQL + Docker deployment

Architecture

🌐 Client (Browser)

↓

🔄 Nginx (Port 3000)

↓

⚡ FastAPI Backend
(Port 8000)

🤖 AI Agent
(Natural Language)

↓

🐘 PostgreSQL (Port 5432)

🎬 Demo

Watch the product in action

🏠 Create or Join Room

Get a unique 6-character code and share it with your roommates

🤖 AI Add Items

Type naturally: "add 3x milk, bread, butter" and AI parses it

✅ Real-Time Sync

Everyone sees changes within 3 seconds — no conflicts

🛍️ Mark as Bought

Tap items to mark as purchased — clear visual feedback
